It has generally been supposed hitherto that the rains or pressure in some way from this standing water were the chief agents in producing the changes of adjustment in the Transit-circle, and it was to test the truth of this supposition that I undertook the present investigation. Tables of the values of the errors were formed for every half-month from 1856 to 1882 by taking the mean of three or four determinations about the first of the month as the error on the first, and similarly for the 15th. The means of these semi-monthly values, though not...
